VERSION 1.1 · MAC & WINDOWS

BoneUp

Sit-too-long reminder · a pixel office pet on your desktop

A little office animal keeps you company in the corner of your screen.
The longer you sit without moving, the more it turns into **bones**, starting from the feet. Stand up and walk around, and it **grows back**.
No pop-ups, no screen locks, nothing that interrupts your work — just an honest look at **how long you've been sitting**.

User Guide · © 2026 Zejun Hu (胡泽军). All rights reserved.

01 The longer you sit, the more bones

Timing starts the moment you clock in. One round is 60 minutes by default (**adjustable from 1 to 60 minutes**, see page 02). Bones creep up from the feet and tail; when a full round is up, the pet becomes a skeleton with glowing red eyes and lets out a low zombie groan.

Just sat down · a whole office cat

Half a round · bones up to the waist

A full round · a skeleton; the button turns red

Stay a skeleton and it only gets worse

Bones for 1–2 rounds · dust, cobwebs, dizzy stars

Bones for 3 rounds · the soul drifts out

Bones for 4 rounds · buried under a cat-ear tombstone

Click STAND UP = "I stood up"

`Not bones yet` One click fully restores it and resets the timer.

`Already bones` Each click restores part of it (the head comes back first), depending on how long it has been bones:

Bones for less than 1 round	100%
1–2 rounds	75%
2–3 rounds	50%
More than 3 rounds	25%

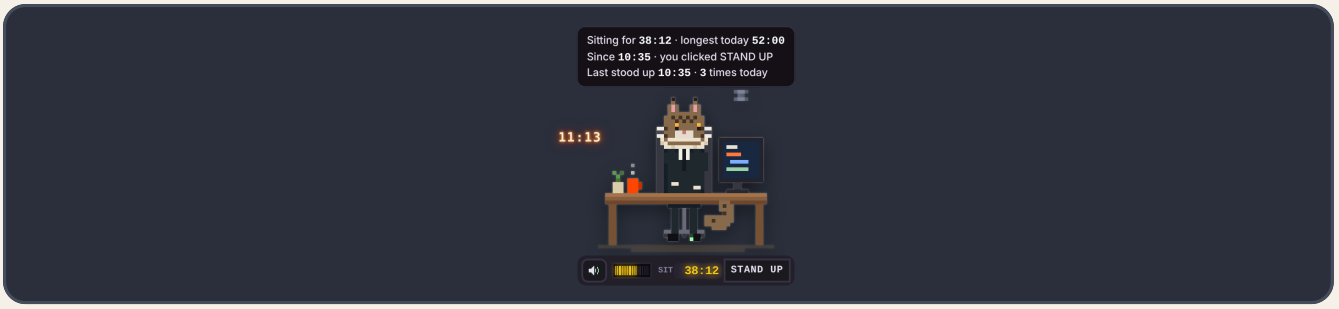

Until it's fully restored, the button shows **WALK 05:00**: go walk for 5 minutes, and you can click again when the countdown ends.

The app can't know whether you really stood up — it's an **honest reminder**, nothing more.

Being away from the keyboard and mouse for a while (default **5 minutes**, adjustable from 3 to 30 in Settings) also counts as standing up. If you edit video or watch footage without touching the mouse, raise it a little.

02 Reading the bar under your pet

The timer shows your **honest, continuous sitting time**, counted from the last time you stood up. Past a full round it turns red and keeps counting. Hover over it to see today's record.

🔈 Speaker

Opens the **volume bar**: drag to adjust. **Focus** next to it = mute + no speech bubbles.

Progress bar

Slowly goes from green to red; full means a whole round. Past that it flashes red.

SIT timer

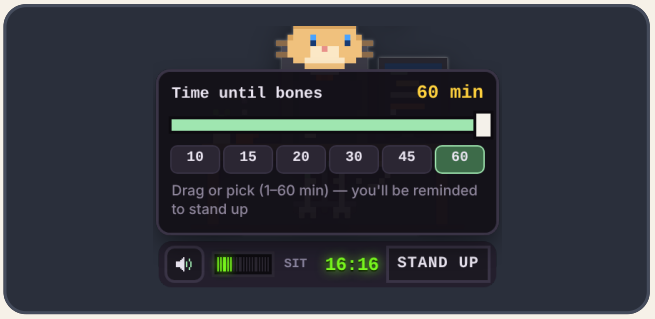

How long you've been sitting. Click it to change the **time until bones**. Shows LUNCH at lunch, ZZZ at nap time, OFF after work.

STAND UP

Click it when you've stood up. It greys out during breaks — no need to click then.

Click the speaker · volume bar + focus mode; the volume is remembered

Click the timer (or the menu's "Time until bones") · 1–60 minutes, takes effect immediately

The three lines shown on hover

Sitting for / longest today	How long this stretch has lasted, and your longest stretch today.
Since HH:MM · reason	When the timer started and why it restarted: clock-in, you clicked STAND UP, back at the computer, or back from a break. If the number looks wrong, this explains it.
Last stood up · N times	The last time you stood up today and how many times in total. Resets the next day.

Other details

- **Glowing clock**: an orange clock floats to the left of the pet showing the time.
- **Drag**: hold and drag the pet anywhere on screen; it stays there next time. Transparent areas don't block the mouse, so you can click the windows behind.
- **Size**: small / medium / large, from the menu.
- **Changing the round length**: time already sat is converted to the new length. Sat 20 minutes and switched 60 to 30? The bar jumps to 2/3. Set it shorter than you've already sat and it turns to bones on the spot.
- **Survives restarts**: shut down, restart or update the app — the timer and bone progress carry on.
- **Language**: menu → **语言 / Language** → Follow system, 简体中文 or English. Switches instantly.

03 A day in the life of your pet

Scenes change automatically with your work schedule, with a speech bubble and a sound at each moment (Monday to Friday by default). Every time below can be changed in Settings.

Time	What happens
09:20	**Clock in**: the pet walks in with its bag, sits down and the timer starts. Even if you turn on the computer or open the app late, it still counts from 09:20.
10:20 · 11:20	**Stand-up reminders**: one every round (60 minutes by default, adjustable) until lunch. Already a skeleton? Zombie groan + STAND UP. Not bones yet but sitting for over half a round? A bone-rattle nudge. Just stood up? It leaves you alone.
11:50	**Lunch**: a bowl of noodles appears and the pet eats with chopsticks, then gets drowsy. All bones grow back.
12:55	**Nap**: the pet stretches, walks to its bed, pulls the lamp chain (the room dims) and sleeps on its side under a blanket, back to you.
13:30	**Wake up**: the alarm rings three times and wakes the screen; the pet gets up, turns on the light and walks back to the desk. The afternoon timer starts.
14:30 …	**Stand-up reminders**: one every round until you clock out.
18:00	**Clock out**: the pet waves, grabs its bag and leaves — just an empty desk and a sleeping monitor.
Overtime	Choose **Working late** in the menu: the pet comes back on the phone, sits down with one sigh and keeps reminding you every round. When overtime ends it says "That's a wrap!".

11:50 noodles at the desk

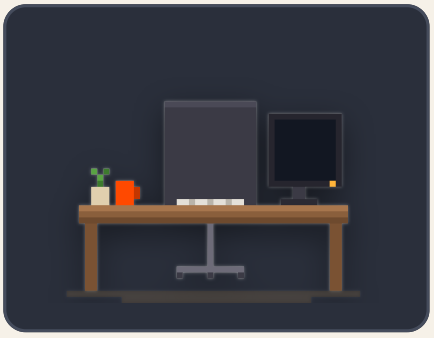

12:55 lights out for the nap

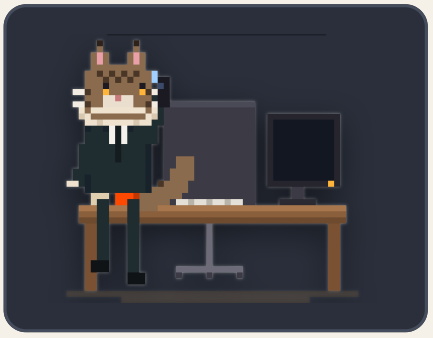

Nap back to you, the blanket rising and falling

18:00 waving goodbye

After work an empty desk

Overtime back on the phone

04 14 skins, each with its own voice

Menu → Desk pet → **Skin**; one click switches. Every skin has its own skeleton, tail and sleeping silhouette. The gentlemen wear a suit and tie; the ladies wear a dress and a bow.

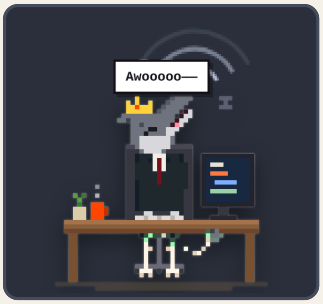

Click it and it calls out

Normally it's quiet — **it only makes a sound when you click it**. Click it while it's working at its desk and most animals also put on their own little show (see the next page).

At lunch, nap time or after work, a click gets just one call. As a skeleton, it only clacks its teeth.

05 Click it and watch the show

New in 1.1. Click the animal while it's at work (or working late) and it performs its own act with its own sound effects. Cracks, scratches and shockwaves stay inside the **pet's own little window** and fade after a few seconds — they never get in the way of your work.

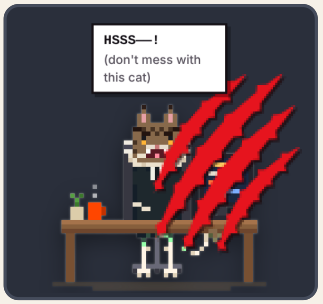

Wolf King
Howls at the sky; sound waves rise from its head

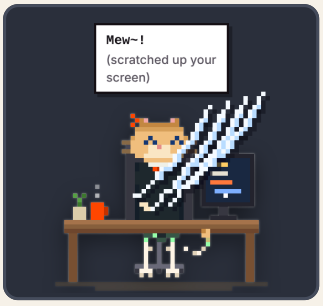

Mr. Lion
A huge open-jawed roar that shakes the window

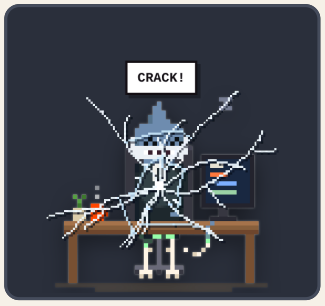

Miss Tiger
The same roar, with fangs and an angry brow

Mr. Maine Coon
Hisses angrily and slashes four blood-red scratches

Miss Golden Shorthair
One meow, then white scratches on the screen glass

Mr. Shark
Rows of teeth snap shut on the screen; the glass cracks

Mr. Elephant
Trunk up, a shockwave and a trumpet; the screen cracks

Mr. Panda
Crunches through a bamboo stalk, then burps

Miss Giraffe
Stretches her neck all the way out of the frame

Mr. Husky
Blushes over flowers... walks off to give them, a slap off-screen, back holding his cheek

Ms. Golden Retriever
The husky comes over with flowers and gets slapped away

Ms. Rabbit
Mr. Fox moonwalks in to flirt — and gets slapped

Mr. Fox
Puts on a top hat and white gloves for a classic dance

Mr. Fox
Moonwalks out of the frame...

Mr. Fox
...a "SLAP!" off-screen; he comes back with a hand print: "...Don't ask"

Tips
Clicking again during a show won't interrupt it — wait until it ends. Mr. Croc only calls out for now. Too loud? Turn it down with the speaker at the bottom left.

06 Menu and settings

Mac: click 🦴 10:20 in the menu bar at the top right (it shows your next reminder). Windows: right-click the skull icon in the system tray at the bottom right.

Today's schedule	All of today's reminders; ✓ marks the ones already past.
Start Task Mode	No fixed schedule? Turn it on when you start working: a round every 25 / 45 / 60 / 90 minutes, or **Custom** (any 1–60), counted from that moment. End it any time.
Working late	Set how late you're working, extend by 1 hour, or cancel overtime. Applies to today only; tomorrow goes back to normal.
Time until bones	New in 1.1: 5 / 10 / 15 / 20 / 25 / 30 / 40 / 45 / 50 / 60 minutes, or a custom 1–60 (Mac). Same setting as the panel that opens when you click the timer.
No reminders today	For days off. On a weekend when you're working anyway, it becomes "Remind me today as usual".
Focus mode	Same as "Focus" in the volume bar: muted, no speech bubbles.
Desk pet	Show / hide, skin, size, "I stood up", and previews of the skeleton stages (they switch back after 12 seconds).
Preview animations	Watch the lunch / nap / wake-up / clock-out / overtime animations any time; afterwards it returns to what's really going on.
Turn off display now	Turns off the screen for your nap in one click (the computer stays awake, so the 13:30 alarm still rings).
语言 / Language	Follow system, 简体中文 or English. Menus, settings and the pet's speech bubbles switch at once.
Settings…	Clock-in time; lunch / nap / wake-up / clock-out times; time until bones (1–60 min); how many minutes away count as standing up; workdays; sound and volume.
Open at login	On by default.
Shortcuts	BoneUp icons on the Desktop and in the Dock (Windows: Desktop and Start menu). After quitting, click one to reopen it. On Mac, clicking it while the app is running makes the pet pop up and say "Here I am!".

Freelancers / students / working from home

No fixed hours? In Settings, turn off "Remind me on the fixed schedule below" and just use **Task Mode**. Turn it on when you start working and the pet turns to bones at the interval you chose. Forgot to turn it off? No problem — once the pet rots all the way to its grave (4 hours unattended), Task Mode ends by itself.

07 Installation and FAQ

Mac

1. Double-click **BoneUp-Mac安装包.dmg** (the Mac installer).
2. Drag BoneUp into the Applications folder next to it.
3. Double-click BoneUp in Applications. You're done when 🦴 appears in the menu bar and the pet appears in a corner of the screen.

Works on Apple silicon and Intel Macs with macOS 12 or later.

Windows

1. Right-click the Windows zip → **Extract All** into a folder.
2. Double-click **install.bat** inside it and wait about 10 seconds.
3. When the "installed" message appears, you're done — the pet shows up at the bottom right.

Requires Windows 10 / 11 (.NET Framework 4 is built in).

FAQ

Mac says the developer can't be verified	In Applications, right-click BoneUp → Open → Open again. You only need to do this once. Or: System Settings → Privacy & Security → Open Anyway.
Windows says "Windows protected your PC"	Click "More info" → "Run anyway".
The menus are in Chinese	Menu → 语言 / Language → English. "Follow system" uses English unless your computer is set to Chinese.
The pet is gone	Menu → Desk pet → Show the desk pet; or open BoneUp again from its Desktop / Dock icon and the pet comes out to say hello.
The timer suddenly reset	Hover over the timer and read "Since HH:MM · reason". Most often you were away longer than the set time and it counted as standing up — raise "Away from the computer … min = stood up" in Settings.
The 13:30 alarm didn't ring	During the nap the app keeps the computer from sleeping on its own, but closing a laptop lid forces sleep and the alarm can't ring. If the computer is muted there's no sound either (the pet still changes).
Too loud / too quiet	Click the speaker at the pet's bottom left and drag the volume bar; click "Focus" to mute it during meetings.
Changing the schedule	Menu → Settings…; changes apply as soon as you save, and today restarts on the new times.
Can I share it with others?	BoneUp is protected by copyright — please contact the author first. See "Terms of Use.txt" in the package, or menu → About BoneUp / Terms of Use.
Uninstall	Mac: quit BoneUp, then drag BoneUp from Applications to the Trash. Windows: run uninstall.bat.

What's new in 1.1 Click acts for 13 animals with brand-new sounds · volume bar · adjustable time until bones (1–60 min) · stand-up nudges on every round · a more reliable zombie groan (it also plays when the app reopens) · elephant animation freeze fixed · **English / 简体中文 language switch** · overtime sighs no longer repeat.
